

Hamaoka Nuclear Power Station Unit 4 Overview of filter vent equipment

Reference 1

- ◇ Construction of watertight underground filter vent room close to the reactor building and installation of filter vent equipment on the floor of this room
- ◇ Laying pipes in the reactor building both from the direction of one section of the containment vessel and from the direction of the upper section of the suppression pool
- ◇ Construction of tunnels to establish underground connections between the reactor building and the filter units and between the filter units and the exhaust stacks
- ◇ Laying pipes following the exterior of the exhaust stacks, extending from directly underneath the exhaust stacks
