

- Trends in high-volume electric power (for industries with contracted power of 500 kW or higher)

High-volume electric power sales dropped 0.8% YoY because of factors such as a decline in production of raw material industry.

Trends in high-volume electric power sales by major industry *Figures in parentheses are YoY growth

Industry sector	Overview
Paper/pulp (-0.5 %)	Figures declined against figures for last year due to factors including a reduction in the volume of power sold due to the suspension of production at some facilities by certain customers.
Chemicals (-5.2 %)	Figures declined against figures for last year due to factors including a decline in production of petrochemical products.
Ceramics, stone and clay (-4.8%)	Figures declined against figures for last year due to factors including a decline in production of graphite electrodes.
Iron and steel (-6.3 %)	Figures declined against figures for last year due to factors including a decline in production of steel for industrial machinery.
Machinery (1.0 %)	Figures increased against figures for last year due to factors including an increase in the production of liquid crystals and semiconductors and an increase in automobile-related production.
